ABOUT ME

I am a Data Science undergraduate at the National University of Science and Technology (NUST) with a strong passion for technology and creativity. Alongside my academic pursuits, I specialize in designing social media posts, digital content, and visual assets that engage audiences and elevate brand presence. I aim to combine data-driven insights with aesthetic design to deliver impactful digital solutions.

EDUCATION

PUNJAB GROUP OF COLLEGES
INTERMEDIATE
2022 - 2024

NATIONAL UNIVERSITY OF
SCIENCE & TECHNOLOGY
BS Data Science
2024- PRESENT

SKILL & TOOLS

- Poster Designing
- Carousels & Infographics
- Python, C++, Java & SQL
- Canva, Photoshop, Illustrator
- Social Media Content Design
- Video Editing (CapCut)
- Problem Solving
- Creative Thinking
- UI/UX Design
- Database Management
- Game Development:
- Team Collaboration

VOLUNTEER EXPERIENCE

- Deputy Director-HAAMI 2.0**2024-NOW
- Designed and led the creation of digital assets, social media posts, and event branding visuals, ensuring consistency and creativity across all platforms.
- Executive – NUST Community Service Club (NCSC)**2024-2025
- Contributed to organizing social initiatives and designing promotional content to boost engagement and community outreach.
- Executive – FICS (Finding Innovative & Creative Solutions)**2024-2025
- Supported the execution of innovation-driven events and contributed to outreach and coordination efforts to engage student participation.
- Executive – NCF (NUST Cultural Fest)**2024-2025
- Contributed to the planning and execution of cultural events, coordinating activities, and designing promotional materials to enhance student engagement.
- Deputy Director – NUST International Club (NIC)**2024-2025
- Organized and facilitated cultural and international exchange events, fostering global connections and promoting diversity within the NUST community.
- Member – NUST Society of Artificial Intelligence (NSA)**2024-2025
- Participated in AI-focused workshops, seminars, and projects, contributing to discussions on emerging technologies and fostering an innovative learning environment.
- HR Executive – NUST Skill Development Club (NSDC)**2024-2025
- Handled member onboarding, maintained internal communication, and supported the planning of skill-building workshops and development sessions.

LANGUAGES

- English (Fluent)
- Urdu (Native)

Executive – Event Management, TABA Youth Chapter

Played a key role in organizing a medical camp, managing 2024-2025 volunteer coordination, and outreach to ensure effective community service delivery.

Executive – EFX

Contributed to the planning and execution of tech-driven 2024-2025 projects and events, supporting operations and participant engagement.

PROJECTS

F4 Invaders – 2D Game Development Project

Developed a 2D space shooter game in C++ using SFML as part of my first-semester project. Implemented game logic, player controls, enemy behavior, and collision detection. Focused on object-oriented programming and basic graphics rendering to enhance gameplay experience.

Lost and Found System – ICT Project

FALL-24

Developed a Lost and Found System to streamline the process of reporting and retrieving lost items within the ICT community. Implemented features like item categorization, user notifications, and a secure database for item tracking and management.

Remote Hospital Management System – Ongoing Project

SP-25

Developing a remote hospital management system using Java with database integration to manage patient records, appointment scheduling, and staff coordination. Focusing on secure data handling, efficient backend processes, and user-friendly interfaces to enhance the healthcare experience.

Blood Donation System – Ongoing Project (DBMS)

SP-25

Designing and implementing a Blood Donation System using database management principles to manage donor information, donation records, and request tracking. Focusing on efficient database design, data integrity, and creating a user-friendly interface to streamline the donation process.

Password Security System – Ongoing Project (DLD)

SP-25

Designing a password security system using digital logic circuits to enhance data protection through encryption and decryption mechanisms. Focusing on implementing secure logic gates, data validation, and encryption algorithms for improved password security.
